FATA EPC awards FRANCO TOSI MECCANICA with second contract for a Steam Turbine Generator for a Thermodynamic Solar Plant in Italy

Following previous contract for the complete turnkey supply of the Steam Turbogenerator for the Partanna Thermodynamic Solar Plant in Sicily, FATA EPC (part of the DANIELI Industrial Group) has awarded a second contract to Franco Tosi for an equivalent turboset for the Stromboli Solar Plant.

FATA EPC was previously appointed as general contractor for the supply, construction and commissioning of both Thermodynamic Solar Power Plants, and is active in the development of other similar projects.

The double-casing turbine is designed for daily start and stop operations, and will utilize approx. 17 tons of steam per hour, producing 4MWel of electrical power, directly feed into local grid.

Please contact Franco Tosi Sales Department at marketing@francotosimeccanica.it for additional details over this Project, and for more information on our capabilities to design specific tailor-made Turbomachines for renewables.
